

## Hyperbaric Oxygen Therapy Lloydminster

Hyperbaric Oxygen Therapy Lloydminster - Oxidative therapy is carried out by introducing extra energy inside the body. This can be done in 3 ways: utilizing Hyperbaric Oxygen and introducing oxygen into the body under pressure, through an infusion of Hydrogen Peroxide or H<sub>2</sub>O<sub>2</sub> in a vein for roughly one hour or through mixing blood with Ozone gas. It only takes a little amount of Hydrogen Peroxide to be able to produce a large amount of oxygen, hence, parts on the body that suffer from poor circulation can benefit greatly from the supply of oxygen.

Oxidative Therapy has been around for many years. In 1920, Dr. T.H. Oliver first made use of Intravenous Hydrogen Peroxide during an outbreak of influenza pneumonia. This successful treatment helped numerous people and results were reported in a British medical journal, the lancet. A few years later, a paper was published by Dr. Charles Farr entitled "Therapeutic Use of Intravenous Hydrogen Peroxide." This paper has become the protocol for doctors who administer H<sub>2</sub>O<sub>2</sub>.

There are different theories which exist to describe the way this particular therapy works. Scientists and researchers are currently discovering that the presence of H<sub>2</sub>O<sub>2</sub> within the body is more complex than initially thought. The benefits of Oxidative Therapy have been show useful for the following health conditions: Cerebrovascular Disease, Cardiovascular Disease, Cardiac arrhythmia, Coronary spasm, Asthma, Peripheral Vascular Disease, COPD, Pulmonary Diseases, Influenza, Raynaud's Phenomenon, Chronic Bronchitis, Bronchiectasis, Herpes Simplex Virus, HIV, Lupus, Immune Disease, Multiple Sclerosis, Alzheimer's, Fibromyalgia, Chronic Fatigue, Environmental Poisonings, Rheumatoid Arthritis, Parkinson's Disease, Migraines, among others.

Since oxidation is a very essential energy producing chemical response within the body which uses different forms of oxygen, the treatment should be controlled carefully in order to prevent damage to surrounding normal tissue. Anti-oxidants in the type of enzymes and vitamins protect the body from oxidative damage. On the other hand, the immune system makes use of oxidative energy as a weapon to be able to directly kill infectious agents like yeast, bacteria, viruses and parasites.
